14:20:49 From Bailey, Mike to Everyone:

The ACM digital library can be found at: **dl.acm.org**

OSUers get access for free so you need to get to it from an OSU domain

14:55:26 Do you have any recommendations for stereographic cameras?

I like the little Fuji one that is shown in the picture. It's not high quality but it is so easy to carry around. It's old. I am sure there are others that are more modern.

14:55:59 What kind of glasses are need to see ChromaDepth?

They're actually called "ChromaDepth" Glasses. 😊 You can order them at:

craig@3dglasesonline.com

or

<http://www.3DGlassesonline.com>

If you want just one, send me an email with your postal address and I will mail you one.

15:00:53 I thought we were doing like web-gl + wasm or something, so it's not actually rendering opengl in the browser. It's pre-rendered

That's correct.

15:18:30 From Sam Jones to Everyone:

I got to use a Magic Leap back in 2018 before they were commercially available. It was super cool!

Very cool! I'm jealous.

16:10:05 Simple one... I overcommitted with my proposal, how should I go about resubmitting to use the solar system?

You could keep doing the same project and explain in your report what isn't working and why. If you want to switch, send me a new 1-page PDF proposal.
