**12:37:02 Why does the hole slice in the sphere have "teeth"? By teeth I mean that part where the splice concaves in. [In the sphere subdivision example.]**

That must be where it stopped drawing having run out of memory to put the new vertices.

**13:29:19 I have a question about the cow whose particles explode too. Is the direction of the particles the same every time you run the simulation of the cow?**

Yes. I didn't make any effort to randomize the particle locations or initial velocities.

**13:30:29 From Sam Jones to Everyone: The exhibit [*The Science of Pixar*] is currently at Ciutat de les Arts i les Ciències in Valencia and Liberty Science Center in Jersey City, if anyone is local and wants to go see it :)**

I hope some of you can see the exhibit, now or sometime in the future. Given what you are doing this quarter, you will find it a lot of fun to see. You will especially enjoy annoying your friends with continuous explanations!

**14:13:45 I'm coming in from Ohio for graduation :P**

Great! I just added graduation information to the Class Resources Page. Personally, I am a graduation addict. I really enjoy them. I especially enjoy it when online students come for graduation. It is so cool to finally get to see what you really look like! Mostly I know you from your disembodied voice on Zoom.

**14:15:22 Where is the [Ecampus graduation] party Saturday morning?**

I don't have specific information yet, but it is usually in the university library or in the Memorial Union ballroom.

**14:16:14 Is there an area for professors at the graduation? I'm graduating as well and would love to meet you / my other professors I haven't met in person.**

Yes, especially at the department graduation celebration on Friday. Professors sit on the stage and shake your hands as you cross the stage and have your name called. You can't miss us, even if you tried. We love meeting you too!
